

NEW FOR 2009

T3 Soft Lightbox

A PROFESSIONAL LIGHTBOX IN A BAG?

A WORLD FIRST!!

Using the brilliantly simple T3 Fabframe display system and fabric panels the first 4 sided lightbox in a bag is now available.

All round illumination

With centrally located lighting, all 4 sides of the box can be illuminated if required.

Can be made to virtually any size

Lightboxes can be built to any size, governed only by the width of the print media or the printing machine.

Make them yourself

The profiles are available in any length up to 2000mm, are easily cut to size and the tube endfitting simply screwed in. This means that you can manufacture your own lightboxes with just a saw and screwdriver!

Lightweight

A 2000m x 750mm x 250mm lightbox, similar to the one in the photo, complete with graphics and lighting weighs just 16kgs. Easily manageable by one person and will fit in a bag just 1200mm long.

T3 Systems are protected by Design Patents, Patent Applications and Design Registrations worldwide.
